

When robustness matters

The seamless special coating

superprotection

No rust. No breaking or abrasion. No slipping.

The universal coating for all loading areas.

The extra: the perfect all-round protection

Commercial vehicles must be able to withstand a lot: lading is carelessly pulled over the platform; tools are tossed in the back, while driving lading vibrates and slides around and, in addition, damages the sensitive car paint. A KCN coating protects your vehicle reliable! It prevents deep scratches, rust, skidding lading and a fall in value.

Other advantages: forget about difficulties in keeping your vehicle clean. The coating is applied in a special high-pressure process and is seamlessly like a second skin. The loading area is thereby permanently shockproof, resistant to almost all chemicals and no servicing is required. Steam jet cleaning is no problem. Plus, the whole coating process takes only up to 4 hours and your car is fully operational immediately after the coating has been applied.

Another advantage: simple and safe loading with addition integral accessory parts.
